GeoSatya · Location Verification JSON Outputs

Real responses from the existing GeoSatya API: incident location, photo and device coordinates, geofence verification and verification status.

> **How these were produced.** The unmodified GeoSatya code (branch `geosatya-location-verification`, commit `9053d0c`) was run in-process with FastAPI's TestClient against a **throwaway SQLite database**, the same way the project's own tests run. Captured 2026-10-29T19:16:57.984757+00:00. Inputs are **synthetic test values**: coordinates offset by known distances from the test point 23.2599, 77.4126 (Bhopal), and generated photos. They were sent as `"mode": "LIVE"` so the geofence applies its normal rules; they are not real field GPS. Every JSON block below is copied verbatim from a response, except the one block in §6, which is labelled as assembled. No API was added, no code was changed, and no external service was called. The Incident Intelligence agent was not configured, so `intelligence.status` is `NOT_CONFIGURED`.

1. Endpoints used (all existing)

Sample	Request	HTTP
Active geofence configuration	`GET /api/v1/config`	200
Citizen report with device location (in-app camera, photo has EXIF GPS)	`POST /api/v1/incidents`	201
Incident detail as the supervisor sees it (photo times + EXIF GPS)	`GET /api/v1/incidents/GS-YSY8S5`	200
Citizen report with location denied: map-pin fallback, gallery photo	`POST /api/v1/incidents`	201
Worker completion 45 m away: FAIL (not accepted)	`POST /api/v1/tasks/TSK-FD819C/completion`	200
Worker completion with location permission denied: NOT_CHECKED	`POST /api/v1/tasks/TSK-FD819C/completion`	200
Worker completion 4 m away with good accuracy: PASS	`POST /api/v1/tasks/TSK-FD819C/completion`	200
Completion detail for the supervisor (full geofence result, device fix, photo)	`GET /api/v1/completions/CMP-4D797E63`	200
Worker completion with weak GPS (±80 m): REVIEW_REQUIRED	`POST /api/v1/tasks/TSK-723CB0/completion`	200
Verification queue (supervisor)	`GET /api/v1/verification-queue`	200
Supervisor approves the PASS completion	`POST /api/v1/completions/CMP-4D797E63/review`	200
Final verification status as the citizen sees it	`GET /api/v1/incidents/GS-YSY8S5`	200
Audit trail of verification events for the incident	`GET /api/v1/evidence-history?incident_id=GS-YSY8S5`	200

Caller identity in demo mode: header `X-GeoSatya-Demo-User` (citizen CIT-DEMO-01, assigned worker, supervisor SUP-DEMO-03). What each role sees is decided by `geosatya/api/views.py`.

2. Incident location

The incident location is locked at submission and is what the worker is checked against. It comes from `incident.location`; the task copies it as `target_latitude` / `target_longitude`.

2a. Device geolocation (primary source)

POST `/api/v1/incidents` → HTTP 201

```
{
  "latitude": 23.2599,
  "longitude": 77.4126,
  "source": "DEVICE_GEOLOCATION",
  "accuracy_m": 9.0,
  "observed_at": "2026-10-29T19:16:56.579311Z",
  "mode": "LIVE",
  "flags": []
}
```

Task target, from the same response:

```
{
  "task_id": "TSK-FD819C",
  "target_latitude": 23.2599,
  "target_longitude": 77.4126,
  "target_source": "ORIGINAL",
  "status": "ASSIGNED"
}
```

2b. Location permission denied: map-pin fallback

POST `/api/v1/incidents` → HTTP 201

```
{
  "latitude": 23.2612475,
  "longitude": 77.4133822,
  "source": "USER_SELECTED_PIN",
  "accuracy_m": null,
  "observed_at": null,
  "mode": "USER_PIN",
  "flags": [
    "USER_SELECTED_LOCATION"
  ]
}
```

`accuracy_m` and `observed_at` are **null** because a map pin has no GPS reading. The flag `USER_SELECTED_LOCATION` labels it as not verified GPS.

3. Photo and device coordinates

3a. Report photo: capture times and the photo's own EXIF GPS (supervisor view)

GET `/api/v1/incidents/GS-YSY8S5` → HTTP 200

```
[
  {
    "media_id": "MED-94FA78B242",
    "role": "REPORT",
    "url": "/api/v1/media/MED-94FA78B242",
    "capture_source": "CAMERA_LIVE",
    "width": 640,
    "height": 480,
    "exif_status": "GPS_FOUND",
    "sha256": "7e53f387c3194dabb95811cd24e9aa73c4ab245e29ab642ca3e3404d09bac658",
    "times": {
      "image_captured_at": "2026-10-29T19:16:55.579347Z",
      "exif_claimed_time": null,
      "uploaded_at": "2026-10-29T19:16:57.579355Z",
      "server_received_at": "2026-10-29T19:16:57.616936Z"
    },
    "exif_gps": {
      "latitude": 23.2599,
      "longitude": 77.4126391
    }
  }
]
```

The photo's EXIF GPS is about 4 m east of the device fix. It is stored as a separate `IMAGE_EXIF` source and never replaces the device location. Citizens and workers get a shorter photo object without `times`, `sha256` or `exif_gps` (see the appendix).

3b. Worker completion: device fix, photo and target (supervisor view)

GET `/api/v1/completions/CMP-4D797E63` → HTTP 200

```
{
  "device": {
    "available": true,
    "latitude": 23.2599,
    "longitude": 77.4126391,
    "accuracy_m": 8.0,
    "mode": "LIVE",
    "observed_at": "2026-10-29T19:16:56.815174Z",
    "unavailable_reason": null
  },
  "target": {
    "latitude": 23.2599,
    "longitude": 77.4126,
    "source": "ORIGINAL"
  },
  "photo": {
    "media_id": "MED-B9F597EBC2",
    "role": "COMPLETION",
    "url": "/api/v1/media/MED-B9F597EBC2",
    "capture_source": "CAMERA_LIVE",
    "width": 640,
    "height": 480,
    "exif_status": "NO_EXIF",
    "sha256": "b09574a9473c31c4b1d6df30885cfdcf666f325115d7e9293e7fa409055b55a0",
    "times": {
      "image_captured_at": "2026-10-29T19:16:55.822354Z",
      "exif_claimed_time": null,
      "uploaded_at": "2026-10-29T19:16:57.822369Z",
      "server_received_at": "2026-10-29T19:16:57.830086Z"
    },
    "exif_gps": null
  }
}
```

4. Geofence verification

Rule (`geosatya/location/geofence.py`). The distance is always recomputed on the server (Haversine) from the reported device position to the task target. Active limits from `GET /config`: radius **15.0 m**, max accuracy **±25.0 m**.

Outcome	When	Accepted for review?	Reason codes
PASS	Inside the radius and (distance − accuracy) fits; accuracy ≤ max; no conflicts	Yes → supervisor	`WITHIN_RADIUS`
FAIL	distance − (accuracy or max accuracy) > radius	No; task stays IN_PROGRESS, worker retries	`OUTSIDE_RADIUS`
REVIEW_REQUIRED	Weak/missing accuracy, at the boundary, EXIF conflict, gallery photo, duplicate photo, simulated not allowed	Yes → supervisor	`POOR_GPS_ACCURACY`, `ACCURACY_NOT_REPORTED`, `BOUNDARY_UNCERTAIN`, `SOURCE_CONFLICT`, `EXIF_FAR_FROM_TARGET`, `PHOTO_LOCATION_UNVERIFIED`, `DUPLICATE_PHOTO`, `SIMULATED_LOCATION_NOT_ACCEPTED`

NOT_CHECKED	No usable device location, or no valid target	No; worker retries	`LOCATION_UNAVAILABLE + reason, NO_TARGET`

Worker completion 4 m away with good accuracy: PASS

POST `/api/v1/tasks/TSK-FD819C/completion` → HTTP 200

Request payload:

```
{
  "description": "Filled and compacted the pothole.",
  "device_location": {
    "latitude": 23.2599,
    "longitude": 77.4126391,
    "accuracy_m": 8.0,
    "observed_at": "2026-10-29T19:16:56.815174+00:00",
    "mode": "LIVE"
  },
  "device_location_error": null,

6. What to share with the dispatch team

Recommendation: share the **incident location object** and the **task target**, not the full incident detail. Dispatch needs to know *where* the job is, *how reliable* that location is, and the current status. It does not need the photos, hashes, EXIF data, worker device fixes or the reporter's name, which are evidence and personal data.

Share	Field (existing)	Why dispatch needs it
Yes	`incident_id`, `category`, `status`, `created_at`	Identify the job and its skill/category; status shows whether it is still open.
Yes	`location.latitude/longitude`	Where the job is (straight-line distance to workers).
Yes	`location.source`, `mode`, `accuracy_m`, `observed_at`, `flags`	How trustworthy the point is (device GPS vs. map pin, simulated, weak accuracy).
Yes	`task.target_latitude/longitude`, `target_source`	The exact point the worker is verified against (it differs only after an audited supervisor correction).
No	`photos`, `sha256`, `exif_gps`, `completions`, worker `device`, `reporter_name`	Evidence and personal data; not needed to assign work.

Assembled from captured fields of samples `report_device` and `status_citizen`. Every value is real, but there is **no existing endpoint** that returns exactly this shape. Today the fields come from `GET /api/v1/incidents/{incident_id}`, which needs a GeoSatya role (supervisor sees everything). A service identity or export for the dispatch team would be a new decision and has not been built.

```
{
  "incident_id": "GS-YSY8S5",
  "category": "road_damage",
  "status": "RESOLVED",
  "created_at": "2026-10-29T19:16:57.606697Z",
  "location": {
    "latitude": 23.2599,
    "longitude": 77.4126,
    "source": "DEVICE_GEOLOCATION",
    "accuracy_m": 9.0,
    "observed_at": "2026-10-29T19:16:56.579311Z",
    "mode": "LIVE",
    "flags": []
  },
  "task": {
    "task_id": "TSK-FD819C",
    "status": "RESOLVED",
    "target_latitude": 23.2599,
    "target_longitude": 77.4126,
    "target_source": "ORIGINAL"
  }
}
```

If the dispatch team also needs the verification result, share only `outcome`, `accepted`, `distance_m`, `accuracy_m`, `radius_m` and `reason_codes` from a completion (§4), not the photo or the device coordinates.

7. Unavailable (null) fields, per sample

Every null leaf in each geolocation response, with the reason. The subtrees `progress`, `intelligence`, `dispatch` and `timeline` (added by the integration commit) are outside this report's scope and left out of these tables; they are still shown in

full in the appendix.

Citizen report with device location (in-app camera, photo has EXIF GPS)

Field (null / unavailable)	Why
`asset_identifier`	The citizen did not enter an asset number.
`asset_label`	This category has no asset-number field.
`task.rework_reason`	The task was never sent back for rework.

Citizen report with location denied: map-pin fallback, gallery photo

Field (null / unavailable)	Why
`location.accuracy_m`	No GPS accuracy: the location was chosen on the map, not read from the device.
`location.observed_at`	No device reading time: the location was chosen on the map.
`task.rework_reason`	The task was never sent back for rework.

Incident detail as the supervisor sees it (photo times + EXIF GPS)

Field (null / unavailable)	Why
`asset_identifier`	The citizen did not enter an asset number.
`asset_label`	This category has no asset-number field.
`photos[0].times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`task.rework_reason`	The task was never sent back for rework.

Worker completion 4 m away with good accuracy: PASS

Field (null / unavailable)	Why
`completion.review_decision`	Not reviewed yet.
`completion.review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`completion.reviewed_by_name`	Not reviewed yet.
`completion.reviewed_at`	Not reviewed yet.
`task.rework_reason`	The task was never sent back for rework.

Worker completion 45 m away: FAIL (not accepted)

Field (null / unavailable)	Why
`completion.review_decision`	Not reviewed yet.
`completion.review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`completion.reviewed_by_name`	Not reviewed yet.
`completion.reviewed_at`	Not reviewed yet.
`task.rework_reason`	The task was never sent back for rework.

Worker completion with weak GPS (±80 m): REVIEW_REQUIRED

Field (null / unavailable)	Why
`completion.review_decision`	Not reviewed yet.
`completion.review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`completion.reviewed_by_name`	Not reviewed yet.
`completion.reviewed_at`	Not reviewed yet.

`task.rework_reason`	The task was never sent back for rework.

Worker completion with location permission denied: NOT_CHECKED

Field (null / unavailable)	Why
`completion.distance_m`	No usable device location, so no distance was computed.
`completion.accuracy_m`	No usable device location, so no accuracy.
`completion.review_decision`	Not reviewed yet.
`completion.review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`completion.reviewed_by_name`	Not reviewed yet.
`completion.reviewed_at`	Not reviewed yet.
`task.rework_reason`	The task was never sent back for rework.

Completion detail for the supervisor (full geofence result, device fix, photo)

Field (null / unavailable)	Why
`review_decision`	Not reviewed yet.
`review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`reviewed_by_name`	Not reviewed yet.
`reviewed_at`	Not reviewed yet.
`result.exif_target_distance_m`	The completion photo has no EXIF GPS, so no photo-to-target distance.
`result.exif_device_distance_m`	The completion photo has no EXIF GPS, so no photo-to-device distance.
`photo.times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`photo.exif_gps`	The photo has no GPS in its metadata.
`device.unavailable_reason`	Not applicable: a device location was available.
`incident.asset_identifier`	The citizen did not enter an asset number.
`incident.asset_label`	This category has no asset-number field.
`incident.photos[0].times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.task.rework_reason`	The task was never sent back for rework.
`incident.completions[0].review_decision`	Not reviewed yet.
`incident.completions[0].review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`incident.completions[0].reviewed_by_name`	Not reviewed yet.
`incident.completions[0].reviewed_at`	Not reviewed yet.
`incident.completions[0].result.exif_target_distance_m`	The completion photo has no EXIF GPS, so no photo-to-target distance.
`incident.completions[0].result.exif_device_distance_m`	The completion photo has no EXIF GPS, so no photo-to-device distance.
`incident.completions[0].photo.times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.completions[0].photo.exif_gps`	The photo has no GPS in its metadata.

`incident.completions[0].device.unavailable_reason`	Not applicable: a device location was available.
`incident.completions[1].distance_m`	No usable device location, so no distance was computed.
`incident.completions[1].accuracy_m`	No usable device location, so no accuracy.
`incident.completions[1].review_decision`	Not reviewed yet.
`incident.completions[1].review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`incident.completions[1].reviewed_by_name`	Not reviewed yet.
`incident.completions[1].reviewed_at`	Not reviewed yet.
`incident.completions[1].result.distance_m`	No usable device location, so no distance was computed.
`incident.completions[1].result.accuracy_m`	No usable device location, so no accuracy.
`incident.completions[1].result.exif_target_distance_m`	The completion photo has no EXIF GPS, so no photo-to-target distance.
`incident.completions[1].result.exif_device_distance_m`	The completion photo has no EXIF GPS, so no photo-to-device distance.
`incident.completions[1].result.times.location_observed_at`	Not set in this scenario.
`incident.completions[1].photo.times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.completions[1].photo.exif_gps`	The photo has no GPS in its metadata.
`incident.completions[1].device.latitude`	Device location unavailable (permission denied).
`incident.completions[1].device.longitude`	Device location unavailable (permission denied).
`incident.completions[1].device.accuracy_m`	Device location unavailable (permission denied).
`incident.completions[1].device.observed_at`	Device location unavailable (permission denied).
`incident.completions[2].review_decision`	Not reviewed yet.
`incident.completions[2].review_reason`	No reason given: approving a PASS needs none / not reviewed yet.
`incident.completions[2].reviewed_by_name`	Not reviewed yet.
`incident.completions[2].reviewed_at`	Not reviewed yet.
`incident.completions[2].result.exif_target_distance_m`	The completion photo has no EXIF GPS, so no photo-to-target distance.
`incident.completions[2].result.exif_device_distance_m`	The completion photo has no EXIF GPS, so no photo-to-device distance.
`incident.completions[2].photo.times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.completions[2].photo.exif_gps`	The photo has no GPS in its metadata.
`incident.completions[2].device.unavailable_reason`	Not applicable: a device location was available.
`incident.completion_photos[0].times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.completion_photos[0].exif_gps`	The photo has no GPS in its metadata.
`incident.completion_photos[1].times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).

`incident.completion_photos[1].exif_gps`	The photo has no GPS in its metadata.
`incident.completion_photos[2].times.exif_claimed_time`	The photo file has no EXIF DateTimeOriginal (synthetic test image).
`incident.completion_photos[2].exif_gps`	The photo has no GPS in its metadata.
`incident.progress.tracking_started_at`	Not set in this scenario.
`incident.progress.arrived_at`	Not set in this scenario.
`incident.progress.resolved_at`	Not set in this scenario.
`incident.progress.etr.basis.travel_source`	Not set in this scenario.
`incident.intelligence.category`	Not set in this scenario.
`incident.intelligence.incident_type`	Not set in this scenario.
`incident.intelligence.severity`	Not set in this scenario.
`incident.intelligence.severity_reason`	Not set in this scenario.
`incident.intelligence.summary`	Not set in this scenario.
`incident.intelligence.location_check_status`	Not set in this scenario.
`incident.intelligence.external_incident_id`	Not set in this scenario.
`incident.intelligence.model_info`	Not set in this scenario.
`incident.intelligence.last_error`	Not set in this scenario.
`incident.intelligence.requested_at`	Not set in this scenario.
`incident.intelligence.completed_at`	Not set in this scenario.
`incident.timeline[5].details.distance_m`	No usable device location, so no distance was computed.
`incident.timeline[5].details.accuracy_m`	No usable device location, so no accuracy.

Final verification status as the citizen sees it

Field (null / unavailable)	Why
`asset_identifier`	The citizen did not enter an asset number.
`asset_label`	This category has no asset-number field.
`task.rework_reason`	The task was never sent back for rework.

Appendix: full responses

Verbatim. For `completion_detail`, the embedded `incident` object (identical to `incident_supervisor`) is collapsed; the full version is in the accompanying JSON file.
